

Butterfly Valve K 220

for application in the harsh environment of the chemical industry

Advantage

- DN 250 to DN 400
- liner as a sealing element
- liner makes additional flange seals superfluous
- cost efficient and direct actuator mounting without mounting kit

Application

- chemical plants
- industrial plants
- electroplating plants

Intended Use

- for shutting off pipeline systems

Flow Media

- Neutral and aggressive fluid or gaseous media, provided that the valve components coming into contact with the media are resistant at the operating temperature in accordance with the ASV-resistance guide.

Nominal Pressure (H₂O, 20°C)

- PN 5 - PN 6

Fluid Temperature

- see pressure-/temperature diagram

Operating Pressure

- see pressure-/temperature diagram

Size

- DN 250 - DN 400

Body / Shut-Off Disc

- PVC-U/PVC-U
- PP/PP
- PP/PVDF
- PVDF/PVDF

Spindle

- stainless steel (1.4305)

Liner

- EPDM
- FPM

Sealing

- FPM
- EPDM

Actuation

- with hand lever, spring-loaded latch for locking plate with 7 notches, each 15°
- with gear box, 1:44
- with electric actuator, DIN EN ISO 5211
- with pneumatic actuator, DIN EN ISO 5211

Connection

- intermediate flange construction with hole pattern
- DN 250 - DN 400 acc. DIN EN 2501, ANSI and JIS on request

Mounting Position

- operating element preferably at the top

Accessories

- limit switch unit

Colour

- body: PVC-U, grey, RAL 7011
- body: PP, grey, RAL 7032
- body: PVDF, opaque, yellowish-white
- hand lever: PVC-U, orange, RAL 2004

Butterfly Valve K 220

Pressure/temperature diagram

P = operating pressure

T = temperature

The pressure/temperature limits are applicable for the stated nominal pressures and a computed operating life factor of 25 years. These are standard values for harmless media (DIN 2403), to which the valve material is resistant.

For other media please refer to the ASV resistance guide.

The durability of wear parts depends on the operating conditions of the application.

For temperatures below 0°C (PP < +10°C) please specify the precise operating conditions of the application.

The rated pressure depends on the valve size and material. For the corresponding rated pressure value of the valve, please refer to the »Order table«.

Pressure loss curve (standard values for H₂O, 20°C)

ΔP = pressure loss

Q = flow

pressure loss and k_v value

The diagram shows the pressure loss ΔP in relation to the flow Q .

Conversion aid:

$$c_v = k_v \times 0.07; f_v = k_v \times 0.0585$$

Units:

k_v [l/min]; c_v [gal/min] US; f_v [gal/min] GB

Flow characteristic

VO = valve opening

$FR = K_v \text{ value}$

Torque (Nm)

d (mm)	280	315	355	400
PVC-U	392	588	850	981
PP	392	588	850	981
PVDF	392	588	850	981

The specified torques are standard values. They were determined at the specified nominal pressures with H₂O, 20°C. These values can be higher or lower, depending on the operating pressure.

Butterfly Valve K 220

Bevel dimension for welding stubs

Installation advice

d (mm)	280	315	355	400
q (mm)xβ (°)	20x30	35x30	55x30	50x30

Machine a bevel to welding necks according to the table, prior to installing the butterfly valve in the pipe.
Otherwise damage to the shut-off disc could occur and leaks would result.

* on request

Maximum permissible flange tightening torque (Nm)

d (mm)	280	315	355	400
Md (Nm)	65	65	80	85

Operating note

Safe operation of the valve can only be ensured if it is properly installed, operated, serviced or repaired by qualified personnel according to its intended use while observing the accident prevention regulations, safety regulations, relevant standards, directives/technical regulations or codes of practice such as e.g. DIN, DIN EN, DIN ISO and DVS*. *DVS = German Welding Society
The intended use includes adhering to specified limit values for pressure and temperature, as well as checking the resistance. This requires all components coming into contact with the medium to be "resistant" in accordance with the ASV resistance guide.

Recommended wiring

VT-Line

$NO_1 = \text{limit switch 1 open}$

NO2 = limit switch 2 open

$NC1 = \text{limit switch 1 closed}$

$NC2 = \text{limit switch 2 closed}$

»q« = open

»b« = closed

manual emergency control

VT-Line

Prior to manual commissioning ensure that the electricity supply is interrupted. It is not necessary to disengage the coupling; it is sufficient to turn the handwheel.

Butterfly Valve K 220, pneumatic [d280 - d400]

Technical data

PA-Line

Option (to be ordered additionally if required)

limit switch unit; positioner; handwheel; pilot solenoid valve; AS Interface connection

actuator type	PA7oS
Function	NC/NO
Torque (start) at 6 bar(Nm)	3273
Torque (end) at 6 bar(Nm)	1504
Control volume (Opening)(Liter)	31
Manipulating time (Opening)(s)	0.8
Manipulating time (Closing)(s)	0.8
Control pressure connection(inch)	1/4
Weight(kg)	118.2

Control pressure connection

Normally closed NC: control pressure to connection »B«,valve opens

Normally open NO: control pressure to connection »B«,valve closes

Double acting DA: control pressure to connection »A«,valve closes control pressure to connection »B«,valve opens

Control:

3/2-way solenoid valves for NC/NO actuators

5/2-way solenoid valves for DA actuators

Note:

The drives require a control pressure of 6 bar for optimum function. Malfunctions may occur, if the control pressure deviates. In this case, a new drive configuration is necessary.
